Product Description

This Ciena® XCVR-S80W23 compatible SFP+ transceiver provides 10GBase-DWDM throughput up to 80km over single-mode fiber (SMF) using a wavelength of 1558.98nm via an LC connector. It is guaranteed to be 100% compatible with the equivalent Ciena® transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

ProLabs' transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. – made or designated country end products."

TX_Disable negate time	T_on		2	ms	Falling edge of TX Disable to rise output sognal above 90% of nominal. This only applies in normal operation, not during start up or fault recovery.
Time to initialize 2-wire interface	t_2w_start_up		300	ms	From power on or hot plug after the supply meeting
Time to initialize cooled module and time to power up a cooled module to Power Level II	t_start_up_ cooled		90	sec	From power supplies meeting or hot plug, or Tx disable negated during power up or Tx_Fault recovery, until cooled power level II part during fault recovery is fully operational. Also, from stop bit-low-to-high SDA transition enabling Power Level II until cooled module is fully operational.

Rx_LOS negate delay	t_los_off		100	µs	From occurrence of presence of signal to negation of RX_LOS.
Maximum Current Ramp on Power Supply					
Icc instantaneous peak current			600	mA	Note 1,2
Icc sustained peak current			500	mA	Note 1,2

Notes:

1. The maximum currents are the allowed currents for each power supply VccT or VccR, therefore the total module peak currents can be twice this value. The instantaneous peak current is allowed to exceed to specified maximum current capacity of the connector contact for a short period.
2. Not to exceed the sustained peak limit for the more than 50 µs; may exceed this limit for shorter durations.
